PART ONE

Design Briefs

Five completely distinct creative briefs, each with a unique philosophy, audience profile, visual language, and design principles. These briefs are intentionally open-ended so your AI design tool can make all creative decisions freely without being constrained by fixed colours, typography, or grid systems.

The Quiet Genius

Core Philosophy:

This design speaks before the person does. It carries the energy of someone who has nothing to prove but everything to show. Every pixel should feel intentional, like nothing was placed without thought. The silence between elements should feel as powerful as the elements themselves. Think of the world's most respected architects, the ones who design spaces where people instinctively whisper. That is the emotional register this design should live in.

Audience Energy:

The person using this theme is accomplished, understated, and deeply confident. They do not need to shout. They have probably been featured somewhere prestigious. They let their work do the talking and their website should feel like walking into a curated gallery where every piece has been selected with ruthless taste.

Visual Language:

The layout should breathe. Space is not empty here, space is a design element. Every section should feel like it has been given room to exist on its own terms. Visual hierarchy should be so natural that the visitor never consciously thinks about where to look next, they simply look. Imagery should feel editorial and intentional, never stock or decorative. If there is movement, it should be slow, deliberate, and elegant, like watching someone turn a page in a rare book.

Design Principles:

Restraint is the highest form of sophistication here. Nothing should feel added for decoration alone. Every design decision should serve communication. The typography should carry personality without being theatrical. The overall experience should feel like the digital equivalent of a perfectly tailored suit, precise, refined, and quietly unforgettable.

Emotional Outcome:

When a visitor lands on this website they should immediately think this person is serious. By the time they leave they should feel slightly inadequate in the best possible way, motivated, impressed, and certain that this is someone worth knowing.

The Creative Disruptor

Core Philosophy:

Rules exist to be understood deeply before being broken beautifully. This design should feel like it was made by someone who studied every convention of web design and then consciously decided to do something more interesting. It should feel alive, unexpected, and completely original. Not chaotic, because chaos is lazy. This is controlled disruption, the kind that makes people stop scrolling and lean in.

Audience Energy:

The person using this theme is a creative force. They might be a director, a brand strategist, a designer, an artist, or a musician. They see the world differently and their website should be proof of that. Their work is their identity and their identity is their work. They are not looking for a job, they are inviting collaborations, commissions, and conversations.

Visual Language:

Think of the most exciting editorial magazine spreads you have ever seen and then imagine those spreads came to life and started moving. Overlapping elements, unexpected scale relationships, text that does not always sit where you expect it, imagery that bleeds beyond its container. The layout should feel like a composition, not a template. Every scroll should reveal something that makes the visitor feel rewarded for continuing.

Design Principles:

Surprise is a core design tool here but it should never come at the cost of clarity. The visitor should always know what they are looking at, they should just be delighted by how they are seeing it. Motion and interaction should feel playful but purposeful. The overall aesthetic should feel like it could only belong to one person, deeply personal, unmistakably original, and impossible to copy without losing everything that makes it work.

Emotional Outcome:

Visitors should feel like they have experienced something, not just browsed something. They should want to share the website the same way they would share a piece of art they discovered. The person behind the website should feel like someone the visitor absolutely needs to work with.

The Power Player

Core Philosophy:

Authority without arrogance. Prestige without pretension. This design should communicate that the person behind it operates at the highest levels of their industry and has the track record to prove it. Think of the world's most respected financial institutions, law firms, and consultancies. They do not use flashy design. They use design that communicates stability, trust, and gravitas. That is the energy here, but modernised for today.

Audience Energy:

This person is an executive, a senior consultant, a board member, or an industry leader. They have decades of experience and a network that most people only dream about. Their clients are organisations, not individuals. Their decisions affect large numbers of people. Their website is not a portfolio, it is a credibility document.

Visual Language:

Structure and hierarchy should be immediately apparent. The design should communicate organisation and discipline through its own visual logic. Photography should be professional and commanding, the kind that appears in business magazines. Data, achievements, and credentials should be presented in a way that feels authoritative and easy to scan. The overall layout should feel like it belongs in a boardroom presentation, polished, structured, and built to impress sophisticated audiences.

Design Principles:

Confidence is the underlying principle. Nothing should feel tentative. Every design decision should feel final and considered. Transitions and interactions should be smooth but not frivolous. The design should age well because credibility does not chase trends. It should look just as impressive in five years as it does today.

Emotional Outcome:

Visitors should feel a sense of trust the moment they land. By the time they finish exploring, they should feel that engaging with this person would be safe, smart, and strategically valuable. Decision-makers should feel comfortable recommending this person to their own networks.

The Digital Native

Core Philosophy:

This is the internet speaking its own language. Not a website trying to look like print or trying to mimic the physical world. This is a design that could only exist on a screen, that uses the medium to its fullest potential, and that feels completely at home in the digital ecosystem of today and beyond. It should feel cutting edge without feeling like it is trying too hard.

Audience Energy:

This person lives and breathes technology, whether they are a developer, a data scientist, a product manager, a UX designer, or an AI specialist. They are probably active in online communities. They are building things that did not exist five years ago. Their audience understands and appreciates technical sophistication and good interface design.

Visual Language:

The design should feel like it was built by someone who deeply understands how interfaces work. Interactions should feel precise and satisfying. Microanimations should reward attention and create a sense of craft. The visual language might reference interfaces, terminals, data visualisations, or abstract digital structures but always in a way that feels refined rather than gimmicky. There should be a sense that behind this beautiful surface is something intelligent and well-engineered.

Design Principles:

Performance and beauty should feel inseparable here. The design should communicate that this person understands both. Nothing should feel over-engineered or decorative without function. The interface should reward exploration and curiosity. Hover states, transitions, and interactive elements should feel like they were designed by someone who cares deeply about the details.

Emotional Outcome:

Visitors who are technical should feel an immediate sense of recognition and respect. Non-technical visitors should feel impressed and slightly in awe. Everyone should leave with the sense that this person is ahead of the curve and exactly the kind of person organisations compete to work with.

The Human Connection

Core Philosophy:

In a world full of polished personal brands and optimised profiles, this design dares to be genuinely human. It should feel warm, approachable, and real. Not unprofessional, but deeply personal. Like getting a coffee with someone and discovering within ten minutes that they are one of the most interesting and genuine people you have ever met. This design builds trust through authenticity rather than perfection.

Audience Energy:

This person is a coach, a therapist, a teacher, a consultant, a speaker, or a service provider whose work is fundamentally about relationships. Their clients choose them not just for their skills but because of who they are as a person. Their website needs to communicate personality as much as it communicates capability.

Visual Language:

Everything should feel handpicked and personal rather than assembled from a template. Photography should feel candid and real. Textures, organic shapes, and imperfect elements are welcome here because they communicate humanity. The design should feel like it has a heartbeat. Storytelling should be woven through every section because this person's journey is part of their value proposition. Quotes, anecdotes, and personal insights should feel at home here.

Design Principles:

Authenticity is the highest design principle. Anything that feels manufactured or overly polished should be reconsidered. Warmth should come through in every micro-decision. The experience of exploring this website should feel like a conversation, not a presentation. Visitors should feel seen and understood even though they are the ones doing the browsing.

Emotional Outcome:

Visitors should feel an emotional connection before they even consciously decide whether to hire or engage. They should think I like this person within the first few seconds. By the time they reach the contact page, reaching out should feel natural and easy, not like a business transaction but like the next step in a relationship that has already begun.

PART TWO

Page Content Descriptions

Eleven comprehensive page descriptions covering every section that will be shown to end users visiting your customers' resume websites. These descriptions are universally applicable across all five design themes and can be fed directly into your AI generation process alongside the design briefs.

Home Page

Purpose:

This is the first impression. It is the page that decides whether a visitor stays or leaves within the first three seconds. Every element on this page should pull the visitor deeper into the website and communicate who this person is at a glance.

Hero Section:

The very first thing a visitor sees should be the person's full name displayed prominently, followed by their professional headline or tagline. This headline should be a single powerful sentence that captures what they do and the value they bring. Beneath the headline there should be a short two to three sentence introduction that expands slightly on who they are. This section should also include a professional photograph of the person because human faces build instant trust and connection. There should be two clear call to action buttons, one directing visitors to view their work or portfolio and another directing them to the contact page.

Quick Snapshot Section:

Below the hero there should be a brief section that gives visitors a fast overview of the person's most impressive numbers or achievements. This could include years of experience, number of clients served, number of projects completed, or any other quantifiable achievement that immediately communicates credibility and scale. These should be displayed as bold prominent statistics that are easy to scan.

What I Do Section:

A concise section that outlines the person's core areas of expertise or services in a simple and scannable format. Each area should have a short title and one or two sentences explaining what it involves. This section should give visitors an immediate understanding of the person's professional scope without requiring them to dig deeper.

Featured Work Preview:

A small curated selection of two to four of their best portfolio pieces or projects displayed visually. Each item should show an image or visual representation, a title, and a very brief description. There should be a clear link or button inviting visitors to see all their work.

Latest Blog Posts Preview:

A small section showing the two or three most recent blog posts with their title, a one line description, the date published, and a link to read more. This communicates that the person is actively sharing knowledge and staying relevant in their field.

Testimonial Highlight:

A single powerful testimonial from a client or colleague displayed prominently. This should include the quote, the name of the person giving the testimonial, their job title, and ideally their company name. This acts as immediate social proof on the most visited page.

Call to Action Banner:

Near the bottom of the home page there should be a strong final call to action section encouraging visitors to get in touch, hire them, or collaborate. This should have a compelling headline, one or two sentences of supporting copy, and a prominent button linking to the contact page.

Bio / About Page

Purpose:

This is the most personal page on the website and often the most read. Visitors come here because they want to understand who this person really is, not just what they do. The content here should feel genuine, layered, and compelling.

Personal Introduction:

The page should open with a warm and engaging introduction that goes beyond the professional headline. This is where the person shares their story in their own voice. It should cover who they are as a professional and as a person, what drives them, and what makes their perspective unique. This should feel like a conversation, not a corporate bio.

Professional Journey:

A narrative account of how they got to where they are today. This is not a list of job titles but rather a story of their career progression, the key turning points, the challenges they overcame, and the experiences that shaped their expertise. This section should feel inspiring and authentic.

Core Values and Philosophy:

A section dedicated to what this person believes in professionally. What principles guide their work? What do they stand for? What will they never compromise on? This is particularly powerful for service providers because clients often choose people whose values align with their own.

Personal Interests and Life Outside Work:

A brief and humanising section that shares something about who this person is beyond their career. This could include hobbies, passions, causes they care about, or things that inspire them. This section makes the person memorable and relatable.

Key Achievements and Milestones:

A curated list of their most significant professional milestones. These should be specific and impressive, not generic. Awards received, organisations built, problems solved at scale, industries transformed. Each milestone should have a brief context explaining why it mattered.

Professional Photo Gallery:

Two to four photographs of the person in professional settings, at work, speaking at events, or collaborating with others. Multiple images help visitors feel like they are getting to know a real person rather than looking at a headshot.

Current Focus:

A short section explaining what the person is focused on right now, what projects they are working on, what they are learning, and what kind of opportunities they are looking for or open to. This keeps the page feeling current and alive.

Resume Page

Purpose:

This page serves visitors who want the formal professional record of this person's career. It should be comprehensive, well organised, and easy to scan while also being available for download in a standard format.

Resume Download Button:

Prominently placed at the top of the page, a clear button allowing visitors to download the resume as a PDF. This should be immediately visible because many visitors come to this page specifically for this purpose.

Professional Summary:

A concise paragraph at the top of the resume content that summarises the person's professional identity, their years of experience, their core expertise, and the value they bring. This should be written for someone who might only read the first few lines.

Work Experience Section:

A detailed chronological list of their professional experience starting with the most recent position. Each entry should include the job title, company name, location, dates of employment, and a list of key responsibilities and achievements in that role. Achievements should be quantified wherever possible because numbers communicate impact more powerfully than descriptions.

Education Section:

A clean list of their educational qualifications starting with the highest or most recent. Each entry should include the degree or qualification name, the institution, the location, and the years attended. Any notable academic achievements, honours, or relevant coursework can be included here.

Skills Section:

A well-organised presentation of their professional skills grouped into logical categories such as technical skills, soft skills, industry knowledge, or tools and software. This section should be visually easy to scan so visitors can quickly identify relevant competencies.

Certifications and Courses:

A list of professional certifications, licences, and completed courses that are relevant to their field. Each entry should include the certification name, the issuing organisation, and the date obtained or the expiry date if applicable.

Languages:

If applicable, a section listing the languages they speak and their proficiency level in each. This is particularly valuable for professionals working in international or multilingual environments.

Volunteer Work and Community Involvement:

An optional but valuable section listing any volunteer roles, community leadership positions, or pro bono work. This adds depth to the professional profile and often resonates strongly with values-driven clients and employers.

Portfolio Page

Purpose:

This is the showroom. It is where the person's work speaks for itself and where visitors form concrete opinions about the quality, range, and depth of what this person can produce. It should be visual, compelling, and easy to explore.

Portfolio Introduction:

A brief two to three sentence introduction at the top of the page that contextualises the work shown below. This might explain the range of work displayed, the industries served, or the types of projects the person takes on.

Filter and Category System:

A set of filter buttons or tabs that allow visitors to browse work by category, industry, project type, or skill used. This is essential for visitors who are looking for specific types of work and do not want to scroll through everything to find what is relevant to them.

Portfolio Grid:

The main body of the page should be a visually rich grid of portfolio items. Each item should display a strong visual thumbnail, the project name, the category it belongs to, and a brief one line description. Clicking on any item should open a detailed project view.

Individual Project Detail View:

When a visitor clicks on a portfolio item they should see a full project page or expanded view that includes a detailed project description explaining the brief or challenge, the process used to address it, the solution delivered, and the results achieved. This should also include multiple images or visuals of the work, the client name if shareable, the year completed, the tools or skills used, and any measurable outcomes or results from the project.

Client Logos or Brand Names:

If the person has worked with recognisable brands or organisations, a section displaying those logos or names adds significant credibility. Even without logos, a simple list of notable clients communicates professional standing.

Projects Page

Purpose:

While the portfolio page shows finished work visually, the projects page goes deeper into specific initiatives, experiments, personal projects, or case studies. This page is for visitors who want to understand how this person thinks and works, not just what they have produced.

Projects Introduction:

A short paragraph explaining what kinds of projects are featured here. This might include personal passion projects, experimental work, open source contributions, research initiatives, or side ventures.

Featured Project:

The page should open with one highlighted project displayed in a larger format with more detail than the others. This should be the most impressive or most relevant project and should include a compelling title, a summary of the challenge, the approach taken, the outcome, and visuals.

Project Cards Grid:

The remaining projects displayed in a clean card format. Each card should show the project name, a short description, the status of the project whether completed, ongoing, or archived, the year it was started or completed, key technologies or methods used, and a link to read more or view the project.

Project Detail Pages:

Each project should have its own dedicated detail page that tells the full story. This should include the problem or opportunity that initiated the project, the research or thinking behind the approach, the process of execution, the outcomes and lessons learned, any collaborators involved, links to live projects or case studies if applicable, and visuals or screenshots throughout.

Skills and Tools Used:

At the bottom of each project detail page there should be a clear list of the specific skills, tools, technologies, or methodologies used. This helps technically minded visitors quickly assess relevance and expertise.

Services Page

Purpose:

This page is for professionals who are offering specific services to clients. It should communicate exactly what they offer, who it is for, what the process looks like, and what the investment involves.

Services Introduction:

A compelling opening that frames the person's services within the context of the problems they solve or the outcomes they deliver. This should speak directly to the visitor's needs rather than simply listing what the person does.

Individual Service Listings:

Each service should have its own section or card that includes a clear service name, a description of what the service involves and what is delivered, who the service is best suited for, the typical process or methodology used to deliver it, the expected timeline or duration, the investment or pricing if the person chooses to display it, and a call to action button to enquire or book.

Process Overview:

A section that walks visitors through what it is like to work with this person from the initial enquiry through to project completion. This demystifies the engagement process and makes potential clients feel more comfortable taking the first step. This could be presented as a simple numbered step by step breakdown.

Frequently Asked Questions:

A section addressing the most common questions potential clients ask before deciding to engage. This might include questions about availability, pricing, process, deliverables, revisions, or communication style.

Service Packages:

If applicable, a tiered presentation of different service packages at different levels of scope and investment. This makes it easy for visitors to self-select the option that fits their budget and needs.

Call to Action:

A strong closing call to action encouraging visitors to get in touch to discuss their specific needs, with a button linking directly to the contact page or booking system.

Skills and Expertise Page

Purpose:

This page gives visitors a detailed and organised view of everything this person is capable of. It goes deeper than the skills section on the resume page and is designed to help visitors quickly assess whether this person has the specific capabilities they are looking for.

Skills Introduction:

A brief paragraph that contextualises the person's skill set, explaining how their combination of skills is unique and what it enables them to do for clients or employers.

Core Competencies:

A prominent section highlighting the three to five skills or areas of expertise that define this person's professional identity. These are the things they do better than most and the things they are known for. Each should have a title and a short paragraph explaining their depth of experience and how they apply this skill.

Technical Skills:

A comprehensive and organised list of technical skills, tools, software, platforms, programming languages, methodologies, or frameworks they are proficient in. These should be grouped into logical categories and presented in a way that communicates proficiency level without being overly clinical.

Soft Skills and Professional Qualities:

A section dedicated to interpersonal and professional skills such as leadership, communication, problem solving, project management, stakeholder management, or creative thinking. Each skill should have a brief real world example of how it has been demonstrated.

Industry Knowledge:

A list of the industries, sectors, or domains in which this person has worked or has specific knowledge. This helps visitors from specific industries immediately identify whether this person understands their world.

Currently Learning:

A short and refreshingly honest section about what this person is currently developing or exploring. This communicates intellectual curiosity, a growth mindset, and keeps the page feeling current and dynamic.

Skill Development Timeline:

An optional but impressive section showing how this person's skills have evolved over the course of their career. This communicates intentional growth and a long term commitment to their craft.

Publications, Certifications and Achievements Page

Purpose:

This page is the formal record of recognition, qualifications, and intellectual contributions. It adds a layer of credibility that goes beyond experience and testimonials by showing external validation of this person's expertise.

Page Introduction:

A short introduction explaining what this page contains and why these achievements matter in the context of this person's professional work.

Publications and Written Work:

A list of any articles, whitepapers, research papers, book chapters, or books this person has authored or contributed to. Each entry should include the title, the publication it appeared in, the date of publication, a brief description of what the piece covers, and a link to read it if it is publicly available.

Speaking Engagements and Appearances:

A list of conferences, events, panels, podcasts, webinars, or media appearances where this person has been featured as a speaker or contributor. Each entry should include the event name, the topic they spoke on, the date, and the audience or context if relevant.

Professional Certifications:

A detailed list of all professional certifications and licences held. Each entry should include the certification name, the issuing organisation, the date obtained, the expiry date if applicable, and a verification link or credential ID if publicly verifiable.

Awards and Recognition:

A list of professional awards, honours, nominations, or formal recognition received throughout their career. Each entry should include the award name, the awarding organisation, the year received, and a brief explanation of what the award recognises.

Academic and Research Contributions:

If applicable, a section covering any academic work, research contributions, thesis work, or scholarly activities. This is particularly relevant for professionals with academic backgrounds or those working in research-intensive fields.

Featured In:

A visually prominent section displaying the logos or names of publications, platforms, organisations, or media outlets that have featured or referenced this person's work. This is one of the most powerful credibility signals on the entire website and should be displayed with confidence.

Blog Page

Purpose:

The blog is where this person demonstrates ongoing expertise, shares their perspective on industry developments, and builds an audience over time. It is also one of the most powerful tools for search engine visibility and long term credibility.

Blog Introduction:

A brief section at the top explaining what this blog is about, what topics are covered, and how often new content is published. This sets expectations and helps visitors decide whether to subscribe or bookmark.

Featured or Latest Post:

The most recent or most popular post displayed prominently at the top of the page with a large visual, the full title, a compelling excerpt of two to three sentences, the publish date, the author name, and a read more button.

Blog Post Grid:

All remaining posts displayed in a clean grid or list format. Each entry should show the post thumbnail image, the title, a short excerpt, the category or tag, the publish date, the estimated reading time, and a link to read the full post.

Category and Tag Filter:

A way for visitors to filter posts by topic or category so they can find content relevant to their specific interests. This is particularly important as the blog grows and accumulates a large number of posts.

Individual Blog Post Pages:

Each blog post should have its own dedicated page with the full article content, the publish date and author information, a featured image at the top, social sharing buttons so visitors can easily share the content, a related posts section at the bottom showing two to three other relevant articles, and a comment section or a call to action encouraging visitors to reach out and continue the conversation.

Newsletter Signup:

A subscription prompt either embedded within the blog page or appearing as a simple banner encouraging visitors to subscribe to receive new posts directly in their inbox.

Testimonials Page

Purpose:

This page is dedicated social proof. It collects and displays endorsements, recommendations, and feedback from clients, employers, colleagues, and collaborators. For many visitors this page is the deciding factor in whether they choose to engage.

Page Introduction:

A brief and confident opening statement that contextualises the testimonials. Something that communicates the person's commitment to delivering results and the relationships they build with the people they work with.

Featured Testimonial:

One standout testimonial displayed prominently at the top of the page in a larger format. This should be the most detailed and compelling endorsement available, ideally from a well-known person or organisation.

Testimonials Grid:

The main body of the page displaying all testimonials in a clean and readable format. Each testimonial should include the full quote, the name of the person giving the testimonial, their job title, their company or organisation, their location if relevant, and ideally a photograph of them. A photograph makes testimonials significantly more credible.

Industry or Category Filter:

If the person works across multiple industries or types of projects, a filter allowing visitors to view testimonials relevant to a specific industry or service type is very useful.

Video Testimonials Section:

If any clients or colleagues have provided video testimonials, these should be displayed in their own section as video testimonials carry significantly more weight than written ones.

LinkedIn Recommendations:

A section that references or displays recommendations from the person's LinkedIn profile. These carry additional credibility because they are verified by the platform.

Results and Outcomes:

Alongside personal testimonials, a section highlighting specific measurable results achieved for clients adds concrete evidence of impact. Revenue generated, time saved, problems solved, goals achieved.

Contact Page

Purpose:

This page exists to make it as easy as possible for interested visitors to take the next step. Friction is the enemy here. Every element should reduce the effort required to get in touch.

Page Introduction:

A warm and inviting opening that encourages visitors to reach out. This should communicate that the person is genuinely open to conversations, collaborations, and opportunities. The tone should match the person's personality, friendly, professional, or both.

Contact Form:

A clean and simple contact form asking for the visitor's name, their email address, the subject or nature of their enquiry, and a message. The form should have a clear submission button. An optional field for their company or organisation name can be included but the form should not be made unnecessarily long.

Direct Contact Information:

Alongside the form, the person's email address should be displayed directly so visitors can choose to reach out through their own email client if they prefer. A phone number can be included here if the person is comfortable sharing it.

Social Media Links:

Clear links to all relevant social and professional profiles including LinkedIn, GitHub, Behance, Instagram, Twitter or X, YouTube, or any other platform where they have an active professional presence.

Location or Time Zone:

A brief mention of where the person is based and their time zone. This is particularly important for international visitors who may want to arrange a call or meeting.

Availability Status:

A short statement about the person's current availability. Are they open to new projects? Are they available for full time opportunities? Are they booking consultations? This saves both parties time and manages expectations immediately.

Response Time Expectation:

A simple line reassuring visitors about how quickly they can expect a response. This reduces anxiety and encourages more people to actually send their message.

Optional Booking Integration:

If applicable, an embedded calendar booking widget allowing visitors to schedule a call or consultation directly without needing to go back and forth over email.
